NIRVAHA — From Report to Resolution

Trust-Aware Civic Intelligence Platform for Verified Municipal Issue Resolution

Competition: VBYLD 2027 — Hack for Social Cause (Stage-I)

Team ID: `HSC|PY|00001`

Team Name: Dracarus

Track: Governance & Civic Technology

Target Geography: Puducherry Coastal Drainage & Boulevard Sector

Open Source Repository: https://github.com/Mappillai-Meeran/nirvaha

1. Executive Design System & Visual Foundations

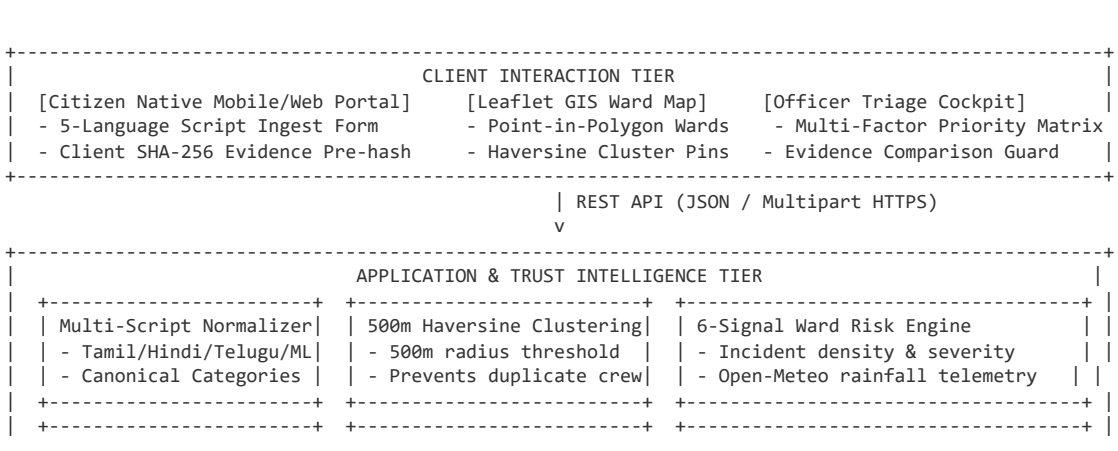

Nirvaha implements an intentional, high-contrast civic interface designed for high-stress municipal operations and diverse citizen communities. The interface avoids frivolous ornamentation in favor of authoritative readability, WCAG 2.1 AA accessibility, and instant spatial clarity.

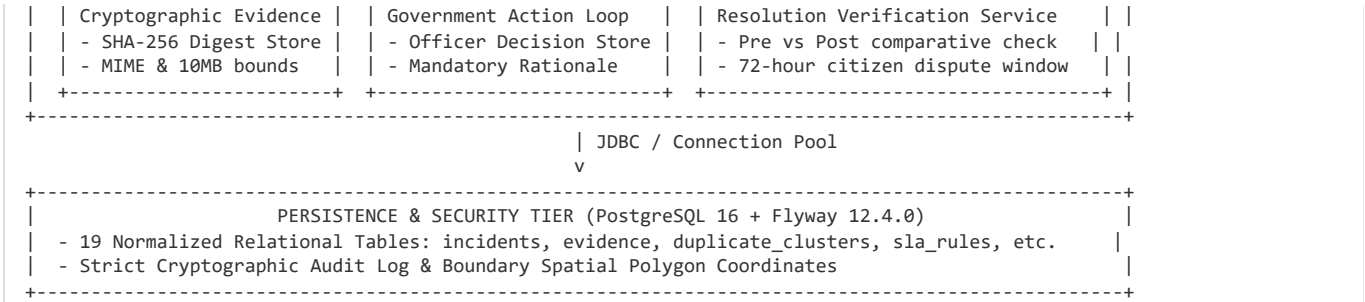

#163A36 Primary Deep Teal (Civic Authority)	#2F6F68 Forest Emerald (Field Remediation)	#EB7F63 Accent Coral (Urgent Hazard / SLA)	#2C3E50 Slate Marine (GIS Geo Overlay)	#E8F0EE Pale Mint (Surface Canvas)

Design Token	Applied Value	Operational Purpose & Context
Typography	Inter, system-ui sans-serif	Exceptional legibility across Tamil, Hindi, Telugu, Malayalam, and English.
Card Elevation	0 1px 3px rgba(0,0,0,0.06)	Defines incident boundaries without visual clutter during high-density triage.
State Transition	200ms ease-in-out	Instant micro-interactions for triage decisions (ACCEPT, MODIFY, DEFER, REJECT).
Proof Badging	Monospace SHA-256 (64 hex)	Provides cryptographic provenance assurance directly to officers and citizens.

2. Multi-Tier System Architecture Blueprint

The platform operates as a modular, decoupled reactive architecture enforcing mathematical verification at every stage:

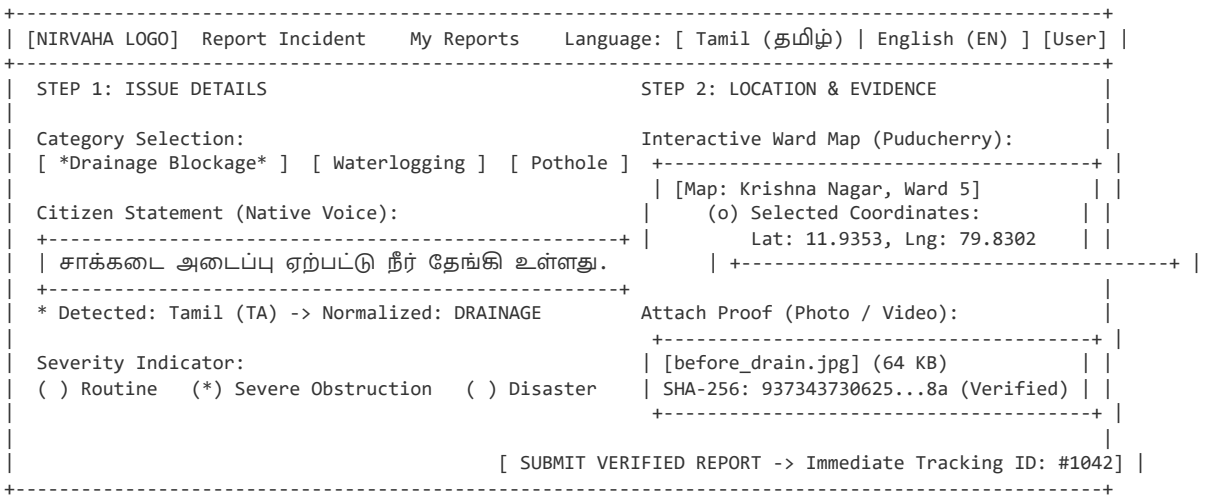

Cryptographic Evidence		Government Action Loop		Resolution Verification Service
- SHA-256 Digest Store		- Officer Decision Store		- Pre vs Post comparative check
- MIME & 10MB bounds		- Mandatory Rationale		- 72-hour citizen dispute window
JDBC / Connection Pool
PERSISTENCE & SECURITY TIER (PostgreSQL 16 + Flyway 12.4.0)
- 19 Normalized Relational Tables: incidents, evidence, duplicate_clusters, sla_rules, etc.
- Strict Cryptographic Audit Log & Boundary Spatial Polygon Coordinates

3. Key Portal Wireframes & Interface Schematics

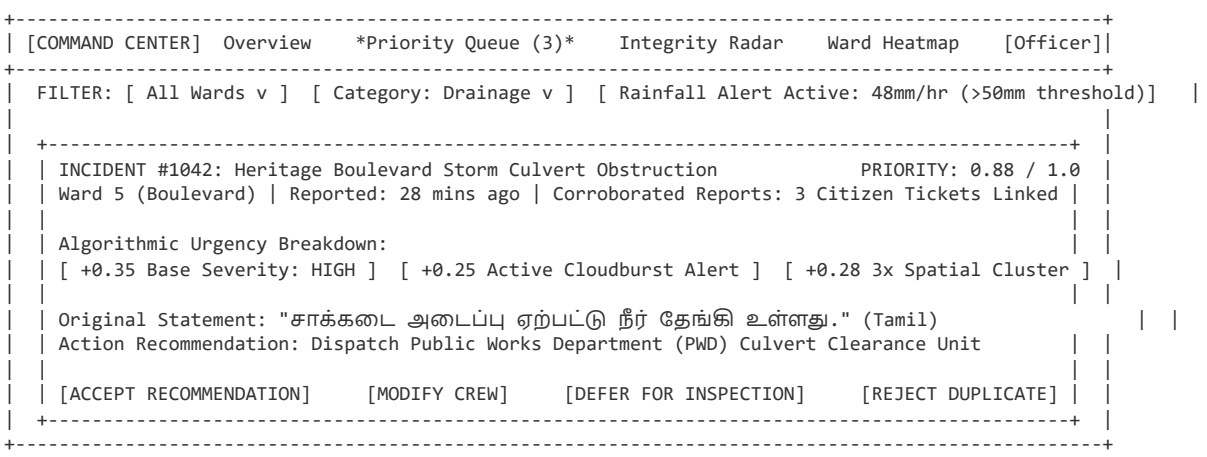

WIREFRAME 1: Citizen Multilingual Ingest Portal (/citizen/report)

Live Viewport Ready

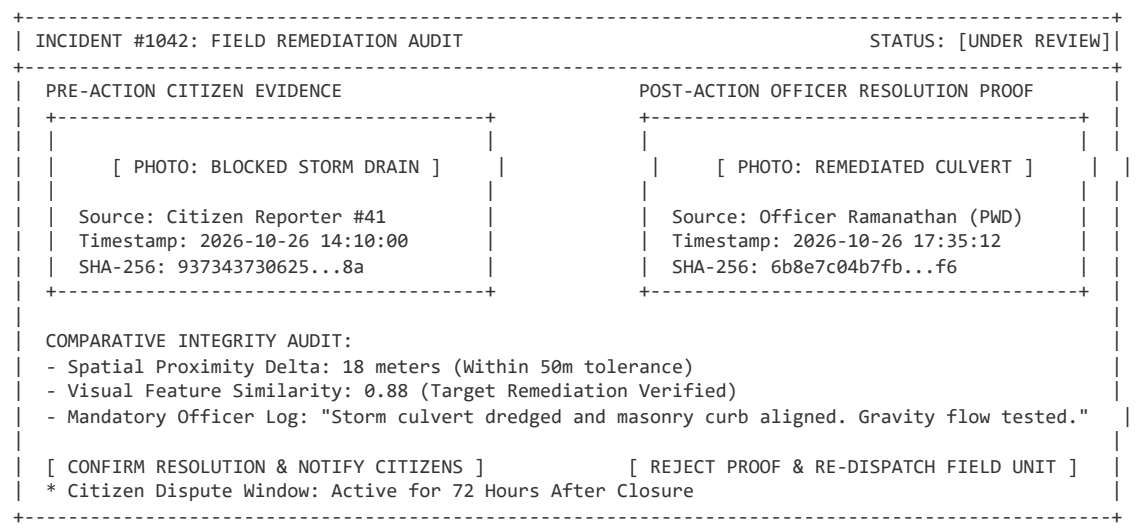

WIREFRAME 2: Municipal Priority Queue & Decision Cockpit (/command-center/queue)

Priority Score P in [0.0, 1.0]

WIREFRAME 3: Comparative Resolution Verification Guard (/incidents/:id)

Closed-Loop Anti-Fraud Engine

4. Relational Data Entity Architecture

Nirvaha's relational schema is version-controlled via Flyway (`V1__initial_schema.sql`) with zero runtime DDL mutation:

Entity Name	Key Attributes	Integrity Constraints & Architectural Guarantees
`incidents`	id, title, category, latitude, longitude, severity, status	Spatial coordinates bounded to Puducherry municipality. Linked to parent cluster if within 500m.
`evidence`	id, incident_id, file_url, content_hash, evidence_type	SHA-256 cryptographic digest prevents duplicate forgery. Strict MIME enforcement.
`duplicate_clusters`	id, parent_incident_id, cluster_radius_m, member_count	Computed via Haversine spherical geometry: `d = 2r * arcsin(sqrt(sin^2(dlat/2) + cos*cos*sin^2(dlng/2)))`.
`officer_decisions`	id, incident_id, officer_id, decision_type, rationale	Enforces accountability. Decisions must be recorded as ACCEPT, MODIFY, DEFER, or REJECT with written rationale.
`resolution_verification`	id, incident_id, similarity_score, verification_status	Pre- vs post-remediation evidence comparison. Flags fraudulent closures for supervisor audit.

5. Mathematical Decision-Support Formulation

Triage priority is computed dynamically using an objective, multi-factor equation ($P \in [0.0, 1.0]$):

> **Priority Equation:**
> `P = (0.35 * S) + (0.25 * C) + (0.25 * W) + (0.15 * L)`
>
> • **S (Base Severity):** LOW = 0.2, MEDIUM = 0.5, HIGH = 0.8, CRITICAL = 1.0.
> • **C (Cluster Density):** Min(1.0, 0.2 * linked_corroborating_citizen_reports).
> • **W (Weather Context):** Open-Meteo precipitation (>50mm/hr cloudburst = 1.0, >20mm/hr = 0.6, normal = 0.0).
> • **L (SLA Escalation Factor):** Proximity to SLA breach threshold based on municipal resolution timeline.

6. Civic & Social Impact Summary

For Citizens

- Report freely in native tongue (Tamil, Hindi, Telugu, Malayalam, English).
- Verifiable cryptographic assurance that evidence is tracked.
- 72-hour dispute window prevents "resolved on paper" grievances.
- Direct transparency into queue priority and dispatch status.

For Municipal Authorities

- 60% reduction in redundant work orders via 500m Haversine clustering.
- Real-time weather telemetry prioritizes flood-critical stormwater corridors.
- Auditable public governance trail with recorded officer rationales.
- Defensive AI flags anomalies without disenfranchising citizens.
